

What our customers say

“ The Wificom team's professionalism and responsiveness were major factors in our decision to choose their solution. Wificom's SAB Server™ has since responded to all our requirements. Its architecture ensures high performance, robustness and scalability. This, combined with the great feature set, has proven the SAB Server™ to be the ideal solution for our WLAN hotspots.

*James Lee,
Managing Director of
Systech Telecom,
Hong Kong*

“ Coming from the operator world we had very clear requirements for our backend solution. Wificom's SAB Server™ was our clear choice, because its proven track record and unique feature set could support our aggressive hotspot rollout. Its robust roaming and settlement architecture enabled WinQ to interface with backend systems of mobile and fixed operators from day one. Its open architecture enables us to use best-of-breed third-party access controllers but also allows us to react fast to new market demands.

*George Boersma,
Managing Director of WinQ,
the Netherlands*

Who we are

Wificom is a leading-edge global supplier of backend billing and service management products for companies operating in the broadband wireless marketplace.

Wificom's innovative and flexible software products enable service providers, operators and venue owners to deliver and manage new value-added broadband services to multiple networks.

Wificom's flagship product SAB Server™ has been selected by customers and partners including regional telecom operators, IT integrators and wireless Internet service providers in more than 20 countries in Europe, Latin America, Middle East and Asia.

Wificom is a co-founder of Pass-One, the international WLAN roaming consortium, and continues to play a key role in defining global multilateral roaming standards.

Wificom was founded at the birth of the WLAN expansion in 2000 and is headquartered in Helsinki, Finland with offices in Sophia Antipolis, France and Dubai, UAE.

Wificom is a privately held company, backed by Europe's leading venture capital firm, 3i Group plc.

Where we're going

Our Goal > To be the premier supplier of service management products for the global broadband industry, and to launch the best new products for vertical market segments by partnering with the leading players in selected market areas.

Our Approach > As a pioneer in the wireless market, Wificom's focus remains on delivering market-driven products based on real customer needs. Wificom's solutions are based on industry standards and an open architecture.

Our Customers > Our client portfolio represents a wide range of customers from telecom operators and IT integrators to wireless Internet service providers and venue owners. Customer satisfaction is our highest priority. We work hard to ensure that we provide the best possible service to our customers and that our products match customer requirements and exceed expectations—today and in the future.

What we offer

Wificom helps its customers bring new wireless and wireline broadband services and products to market in a fast, cost-effective manner.

Wificom SAB Server™ is a centrally managed all-in-one solution that streamlines the rollout of hotspot services and minimises associated costs.

SAB Server™ is an open solution that seamlessly integrates various vendors' access controllers, access points and other network equipment into one reliable, unified system. This open architecture gives our customers the freedom to build their hotspot networks with the best and most suitable equipment offered by their preferred vendors.

Wificom's product development team produces the highest quality products, designed to answer marketplace needs. Our responsive professional services team ensures that, when needed, solutions can be quickly tailored to customers' particular requirements.

SAB Server™

SAB Server™ is a complete server-side software solution for broadband Internet service providers. It integrates service creation, billing, rating, roaming, customer care, reporting, device independent content delivery and value-added location-based services.

Combining the advantages of an open J2EE-based architecture with a unique feature set and scalability, SAB Server™ delivers the ideal backend billing and service management platform for service providers of any size. SAB Server™ has built a track record with the fastest time to market and ROI for any service provider.

Wificom Roaming Advantage

SAB Server™'s advanced roaming engine enables service providers to easily add new roaming partners, specify pricing rules and manage clearing and settlement. With SAB Server™, setting up multilateral, uni- or bi-directional, roaming relationships is feasible while preserving the freedom to negotiate tariffs bilaterally, even in an automated fashion.

As a leader in roaming technology, Wificom is partnering with operators, service providers and clearinghouses to define roaming standards and bring them to market through the SAB Server™ product line.

Professional Services

Wificom Professional Services offers advanced expertise for consulting, customised development and integration projects.

Our skills and wide-ranging experience, from IT to telecom to other high-tech industries, combine with Wificom technology to create extraordinary value for our customers.
